Security Features

To combat forgery, the smart identity card has a number of sophisticated security features, including the following:

- A triangle printed with optical variable ink beside the chip, which changes in colour between reddish gold and green when viewed at different angles
- Multiple laser images of the holder's photograph and identity card number in the lower left corner, which appear alternately when viewed at different angles
- Kineprint letters on the left of the multiple laser images – a red letter 'H' and a black letter 'K', which emerge alternately when viewed at different angles

More information is available through the following link.

Using a Smart Identity Card

The benefits of using a smart identity card are as follows:

- High security – data are engraved into different layers of the card and stored in the 'chip', which helps to prevent lost or stolen cards from being altered or used by other people.
- Greater convenience – the card may be used in various non-immigration applications: for instance, as an e-Certificate or a library card.
- Quality service – the smart identity card is the foundation of the delivery of electronic government services. In future, smart identity card holders will be able to enjoy various kinds of public services simply by going on-line at home or making use of smart identity card readers without having to attend government offices in person.
- More travel convenience – with the thumbprint templates stored in the chip of the identity card, holders can enjoy more convenient immigration clearance via the e-channels of the Automated Passenger Clearance System and the Automated Vehicle Clearance System.

Smart identity card readers are installed in the immigration self-service kiosks at Immigration Headquarters in Wan Chai, the Registration of Persons Offices and immigration control points. Using these readers, the holder can:

- View the personal data stored in his/her card's 'chip'

- View the content and change the PIN of a Hong Kong Post e-Cert if he/she has one
- Update his/her condition of stay or limit of stay if he/she is a Hong Kong resident subject to a condition of stay

No fees are charged for using these kiosks. Information on kiosk locations is available through the following links.
